Personal Projects

Ecommerce Store – Admin
🔗 github.com/ecommerce-store

TypeScript React MUI React-Router-DOM Swal2
Redux-ToolKit Redux Saga React Query Tailwind

</\> Demo : ecommerce-store-ab21.vercel.app

- The project includes an administrative dashboard, empowering store owners to manage product inventory, update product details, and track sales and revenue.
- Using redux-toolkit that simplifies the setup and usage of redux, a state management tool with redux persist that saves and restores the redux state to the local storage.
- The project is designed with responsiveness in mind, ensuring that the application adapts to different screen sizes and devices, including desktops, tablets, and mobile phones.

Ecommerce Store – Client
🔗 github.com/ecommerce-store

TypeScript React MUI React-Router-DOM
Redux-ToolKit Redux Saga Tailwind Swal2

</\> Demo : ecommerce-store-rose.vercel.app

- The application provides a comprehensive product catalog where users can browse through different categories, view product details, and add items to their cart.
- Users can easily manage their shopping carts, add or remove items, and proceed to the secure checkout process to complete their purchase.
- The project includes user authentication functionality, allowing users to create accounts, log in, and securely manage their profiles and order history.

Ecommerce Store – Server
🔗 github.com/ecommerce-store

JavaScript express-async-errors ExpressJS NodeJS
jsonwebtoken CORS MongoDB bcrypt

- Using express-async-errors that handles errors in async functions without try-catch. It makes my code simpler and easier to read and maintain.
- Using cors lets requests from different origins access my server. This helps web apps that talk to APIs on different domains or servers.
- Implemented a secure authentication system using refresh tokens and access tokens to protect user accounts and data from unauthorized access and malicious attacks.
